

# SCAFFOLD BUILDER

**\$47,166 AVERAGE ANNUAL SALARY\***

Do you enjoy team driven activities that involve strategy, communication and balance? Apply these skills to a career by becoming a scaffold builder. A scaffold builder works at great heights to install temporary structures such as ladders, walkways and handrails with a variety of power tools and lifts. These structures assist with constructing or repairing power plants, stadiums, hotels and other construction projects. Working effectively with others and understanding basic math skills are the secrets to a successful career.

## Education Options

- Technical schools
- Community colleges
- Registered apprenticeships
- Industry training programs

*Students can start in high school where programs are available.*

*\*Average base salary does not include overtime or incentives.*
